Cosby Steele Rogers, Virginia Tech, "An Introduction to Theories of Human Development" examines the development process looking at the series of changes that occur as a result of an interaction between biological and environmental factors. Why might our behavior as an adult be so different from when we were infants? Why and how does one stage of development follow the next? Are the changes that we experience abrupt in nature or smooth and predictable? Author Neil J. Salkind reflects on such critical questions to help readers understand what happens along the way as one develops from infancy through later life. This book provides a comprehensive view of the primary theoretical models of human development including those from the biological, psychoanalytic, behavioral, and cognitive developmental perspectives along with a brief discussion of a historical background for each of these approaches. "An Introduction to Theories of Human Development" examines the application of these theories to various aspects of human development such as the effectiveness of early intervention, individual differences, adolescence, and sociobiology. Features of this text: a final integrative chapter compares the various theories presented in the book using Murry Sidman's model of six criteria for judging a theory to help develop students' skills for critically assessing theory. Classic approaches to understanding human behavior across the lifespan are also examined. Pedagogical features such as chapter opening quotes, boxed highlights, key terms, a glossary, and websites for further reading enhance student understanding of everyday human behavior. "An Introduction to Theories of Human Development" is an accessible text for advanced undergraduate students in the social and behavioral sciences including such fields as psychology, education, human services, nursing, sociology, social welfare, and human development and family studies.
