the occupational safety and health administration osha is not close to meeting its mandate to protect american workers according to administrative law specialists mcgarity and shapiro thousands of men and women are still victims of workplace accidents and occupational

disease the goal of this book is to analyze why osha has failed and to suggest what can be done to set it back on track the book divided into six parts evaluates the current status of the protection of workers and provides a history of osha regulation the authors suggest four methods to reduce workplace health and safety risks 1 better management of osha 2 reduced oversight by the courts and the executive branch 3 a change in osha s legislative mandate and 4 empowering workers to protect themselves this important work will be of interest to scholars and professionals in occupational health labor economics labor law and human resource management

the purpose of the work described in this report was to identify methods that are currently being used in the department of energy doe complex to identify and control hazards risks in the workplace evaluate them in terms of their effectiveness in reducing risk to the workers and to develop a preliminary method that could be used to predict the relative risks to workers performing proposed tasks using some of the current methodology this report describes some of the performance indicators i e safety metrics that are currently being used to track relative levels of workplace safety in the doe complex how these fit into an integrated safety management ism system some strengths and weaknesses of using a statistically based set of indicators and methods to evaluate them also discussed are methods used to reduce risk to the workers and some of the techniques that appear to be working in the process of establishing a condition of continuous improvement the results of these methods will be used in future work involved with the determination of modifying factors for a more complex model the preliminary method to predict the relative risk level to workers during an extended future time period is based on a currently used performance indicator that uses several factors tracked in the cairs the relative risks for workers in a sample but real facility on the hanford site are estimated for a time period of twenty years and are based on workforce predictions this is the first step in developing a more complex model that will incorporate other modifying factors related to the workers work environment and status of the ism system to adjust the preliminary prediction

suggests a methodology for workplace risk assessment for use by trade union activists involved with occupational health presents guidelines incl flowcharts and questionnaires for a strategy work process description identifying problems etc

examines how people use label information on hazardous products

in 2003 just before the start of the us invasion of iraq military planners predicted that the mission s success would depend on using diverse sources for their workforce while thousands of us troops were needed to secure victory in the field large numbers of civilian contractors many from poor countries in africa and asia were recruited to provide a range of services for the occupying forces in contract workers risk and the war in iraq kevin thomas provides a compelling account of the recruitment of sierra leonean workers and their reasons for embracing the risks

of migration in recent years us military bases have outsourced contracts for services to private military corporations who recruit and capitalize on cheaper low skilled workers thomas argues that for people from post conflict countries such as sierra leone where there are high levels of poverty and acute unemployment the opportunity to improve their situation outweighs the risk of migration to war torn iraq examining migrants experiences in their native country at us bases and after their return to sierra leone thomas deftly explores the intricate dynamics of risk sets up a theoretical framework for future researchers and offers policy recommendations for decision makers and practitioners in the field incorporating the voices of sierra leonean contractors who were manipulated and exploited contract workers risk and the war in iraq turns the spotlight on a subject that has remained on the periphery of history and reveals an unexpected consequence of the war on terror

the two volume set Incs 10286 10287 constitutes the refereed proceedings of the 8th international conference on digital human modeling and applications in health safety ergonomics and risk management dhm 2017 held as part of hci international 2017 in vancouver bc canada hci 2017 received a total of 4340 submissions of which 1228 papers were accepted for publication after a careful reviewing process the 75 papers presented in these volumes were organized in topical sections as follows part i anthropometry ergonomics design and comfort human body and motion modelling smart human centered service system design and human robot interaction part ii clinical and health information systems health and aging health data analytics and visualization and design for safety

traditionally health care worker injury exposure data is analyzed one category at a time which tends to isolate the researcher from a more global perspective of an industry wide analysis the epidemic of health care worker injury an epidemiology provides an industry wide analysis that facilitates a wide angle view of the dangers of working in health care by focusing on the major categories of health care worker injury needlesticks the most prevalent risk back injury the most expensive risk violence and assault health care workers account for more than half of all assaulted service workers infectious diseases such as tuberculosis and hepatitis c latex allergy which now affects almost 10 of health care workers managed care and its profound effect on the injury rates through downsizing deskilling and increased acuity injuries to different populations of health care workers home health care injury rates long term care injuries which have doubled in the last decade

the industrial workplace should be an environmentally sound and reliable operation with established safety and health policies and practices most companies work hard to achieve this goal by having industrial safety and risk management programs in place the key benefits of a first class isrm program are the reduction of risk to people environment assets and production for company personnel contractors the public and investors professors wilson and mccutcheon offer an integrated approach to industrial safety and risk management and explain the elements of

practice required to manage health safety and environmental risk effectively contributors from industry and government add their expertise to provide a comprehensive examination of issues concerning industrial health safety and risk management programs risk assessment and management causation models and systematic incident investigation and human factors case studies of industrial disasters offer lessons in how to proactively reduce risks in operations or projects industrial safety and risk management provides a solid base for students and industry to implement manage and improve their understanding and knowledge of safety and risk management programs it provides an excellent training program for new professionals junior managers and supervisors working in industry

reports the results of an analysis of combined mortality data on 95 673 nuclear industry workers at seven facilities in the usa uk and canada workers at these facilities which include both atomic energy stations and nuclear weapons plants have been monitored in previous studies to determine the health effects of external exposure to ionizing radiation by combining and assessing data from previous studies the present analysis aimed to develop more precise estimates of the risk of radiation induced cancer and thus to strengthen the scientific basis for setting radiation protection standards the study also compared risk estimates among workers with estimates obtained in high dose studies including investigations of atomic bomb survivors and of patients irradiated for therapeutic purposes the results represent the most comprehensive and precise direct assessment to date of the carcinogenic risk of protracted external exposure to generally low doses of ionizing radiation the combined analysis of data on nuclear industry workers found a significant increase in the risk of leukemia and of myeloid leukemia in particular at relatively low dose levels the study also provided an opportunity to examine some of the previously reported associations between low doses of ionizing radiation and mortality from specific cancer types of the 36 cancer types or groupings considered most showed little or no association with radiation exposure apart from leukemia multiple myeloma was the only cancer to exhibit a statistically significant association with radiation dose
